# 100% plastic free

from BIO granulate

Our new ORGANIXtex protective cover is the perfect solution for you as an environmentally conscious customer. With it you have a **green alternative** to the common plastic packaging of your cleaned clothes.

Because ORGANIXtex consists of **100% organic granules** and still offers the same advantages as conventional packaging.

# 100% protective

hygienic and durable

With ORGANIXtex your favourite clothes remain **100% hygienically packed.** Cleaned garments are optimally protected against moisture and dust, but also against physical contact, e.g. during transport.

Thanks to its air-permeable characteristics, your packaged clothes can even be stored for longer periods or when travelling.

# 100% compostable

in home compost

Other than so-called bio-plastics, which are often found on the market, the ORGANIXtex material is not only biodegradable, but also **completely home compostable.**

This means that no energy-intensive rotting processes are necessary in the recycling plant – ORGANIXtex naturally weathers in your domestic compost.

# Responsibility

One of our natural resources.
